ENERGY-SAVING OPPORTUNITIES FOR PLACES OF WORSHIP

Did you know FOCUS ON ENERGY® helps places of worship, like yours, to **lower operating costs** and **earn incentives**? Through energy-efficient improvements, you can enhance the appearance of your building and make it a more comfortable environment. Even better, the typical payback period for these projects is less than five years.

focus on energy®

Partnering with Wisconsin utilities

CUT YOUR ENERGY COSTS.

INVEST IN YOUR FAITH COMMUNITY.

- 1 Upgrade to LED lighting**
 - ENERGY STAR® certified LED lighting uses an average of 90% less energy and lasts an average of 15 years, which is up to 25 times longer than incandescent options.¹
 - Start in areas with high runtime hours like parking lots and hallways to see the quickest payback.
- 2 Install a smart thermostat**
 - **Save up to 20% on cooling costs and 5% on heating costs** by installing an ENERGY STAR®, WiFi-enabled smart thermostat.²
 - Smart thermostats automatically adjust temperature settings and offer features like occupancy sensing, remote scheduling and intelligent control of HVAC equipment.
- 3 Add Demand Controlled Ventilation (DCV)**
 - **Save up to 40%** on heating and cooling costs by adding CO₂ sensors to spaces like sanctuaries, classrooms and auditoriums.
 - DCV controls your HVAC system based on occupancy to eliminate unnecessary heating and cooling while still keeping occupant comfort a top priority.
- 4 Check doors and windows for air leaks**
 - Your building requires more energy for heating and cooling when leaks exist.
 - Examine your building and **repair air leaks** with weather stripping and caulking to prevent the loss of conditioned air.
- 5 Maintain your steam system**
 - Each foot of uninsulated steam pipe wastes an average of \$7.50 per year in energy costs – yet only costs about \$8 to fix.
 - Surveying and repairing steam traps can **save over \$100 per year** for each trap failed open.²
